Canada Future Directions in IBD

Precision medicine from the basic to translational science perspective

Bram Verstockt, MD PhD

Dpt. Gastroenterology and Hepatology, University Hospitals Leuven, Belgium

Dpt. Chronic Diseases and Metabolism, KU Leuven, Leuven, Belgium

Disclosures

- financial support for research from AbbVie, Biora Therapeutics, Landos, Pfizer, Sosei Heptares and Takeda.
- speaker's fees from Abbvie, Biogen, Bristol Myers Squibb, Celtrion, Chiesi, Falk, Ferring, Galapagos, Janssen, Lily, MSD, Pfizer, R-Biopharm, Takeda, Tillots Pharma, Truvion and Viatrix.
- consultancy fees from Abbvie, Alimentiv, Applied Strategic, Atheneum, BenevolentAI, Biora Therapeutics, Bristol Myers Squibb, Galapagos, Guidepont, Landos, Lily, Mylan, Inotrem, Ipsos, Janssen, Pfizer, Progenity, Sandoz, Sosei Heptares, Takeda, Tillots Pharma and Viatrix.

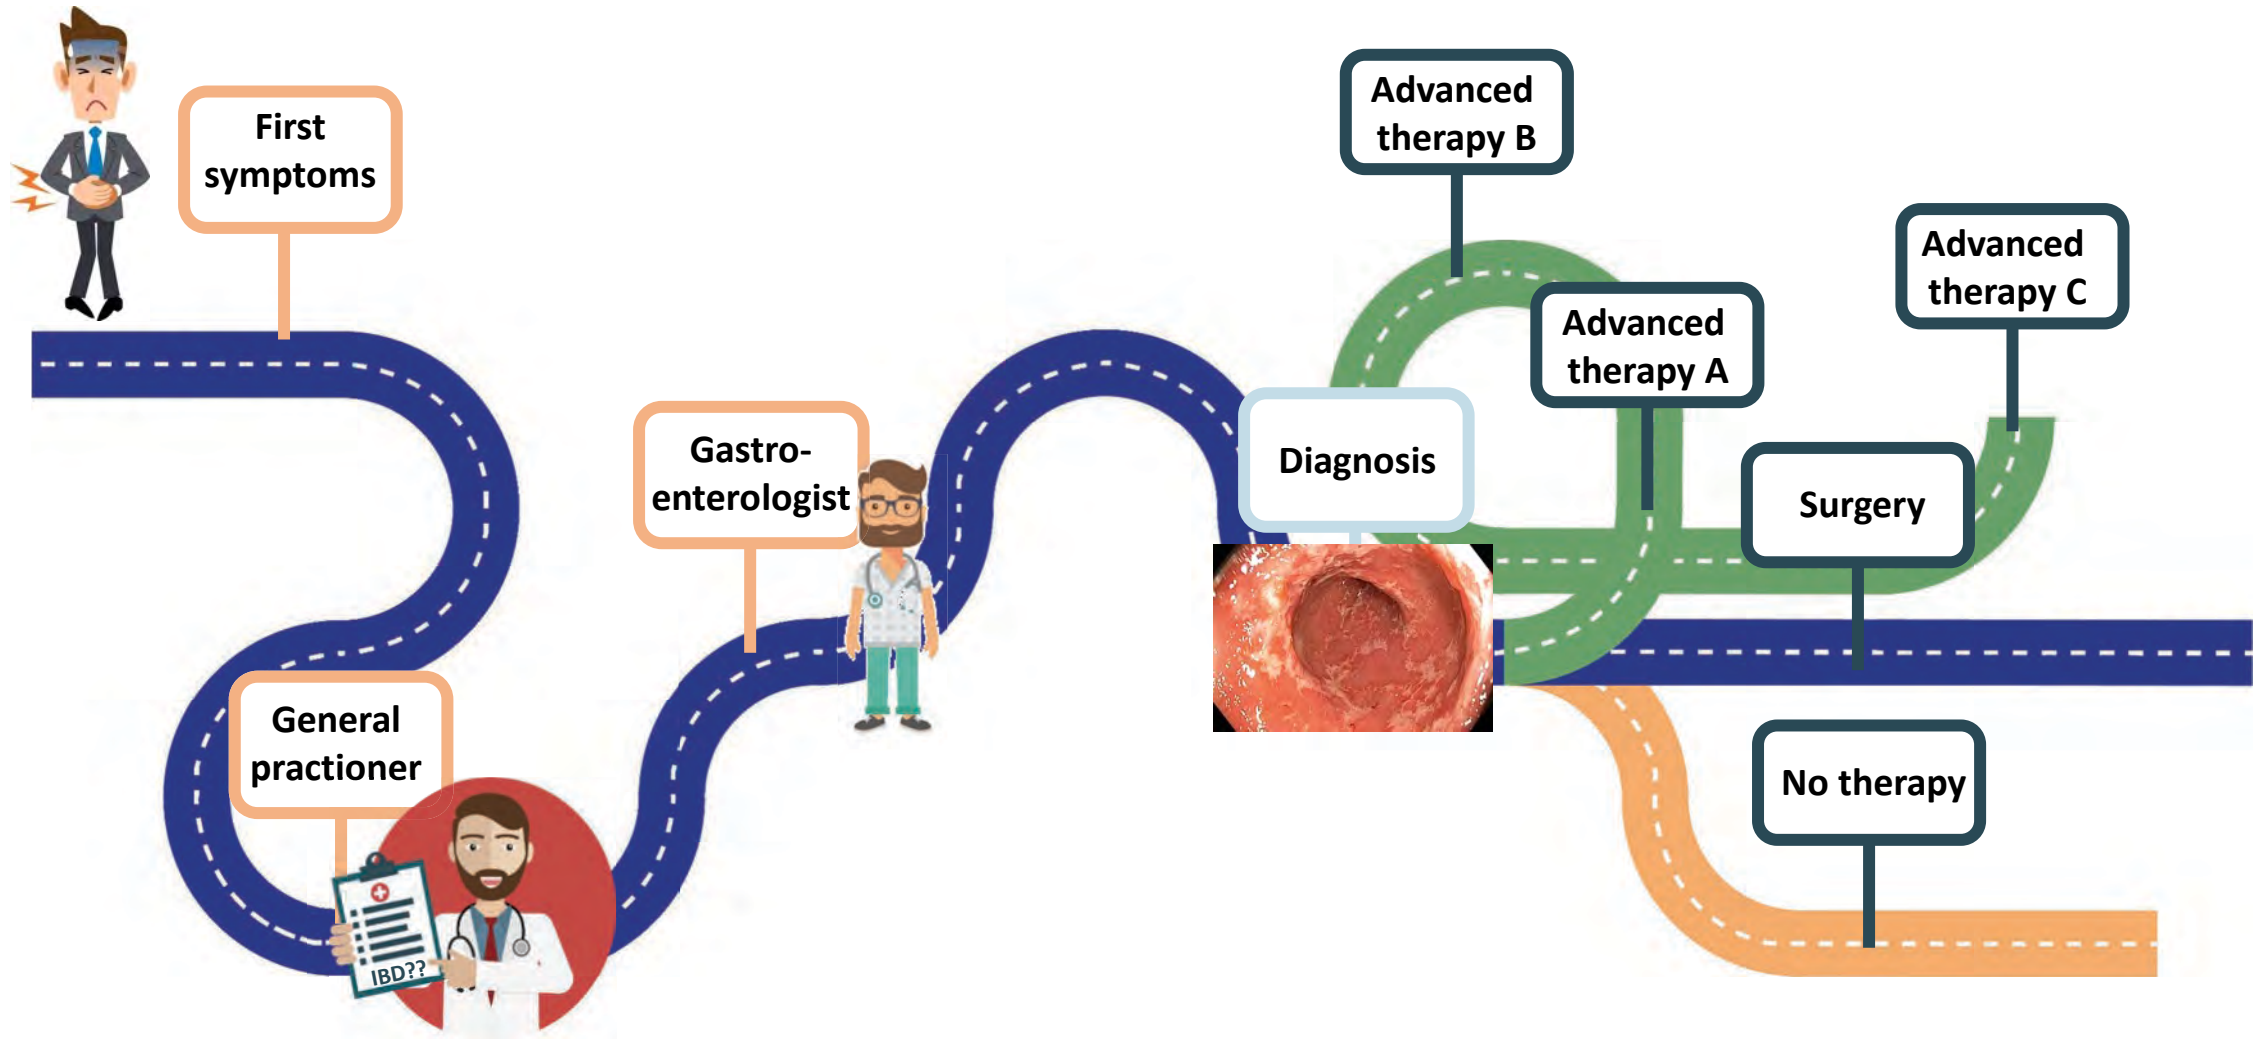

Precision medicine is universal

*“Doctors have always recognized that **every patient is unique**, and doctors have always tried to **tailor their treatments** as best they can to individuals. You can match a blood transfusion to a blood type — that was an important discovery. **What if matching a cancer cure to our genetic code was just as easy**, just as standard? What if figuring out the right dose of medicine was as simple as taking our temperature?”*

*President Obama, January 30, 2015
State of the Union*

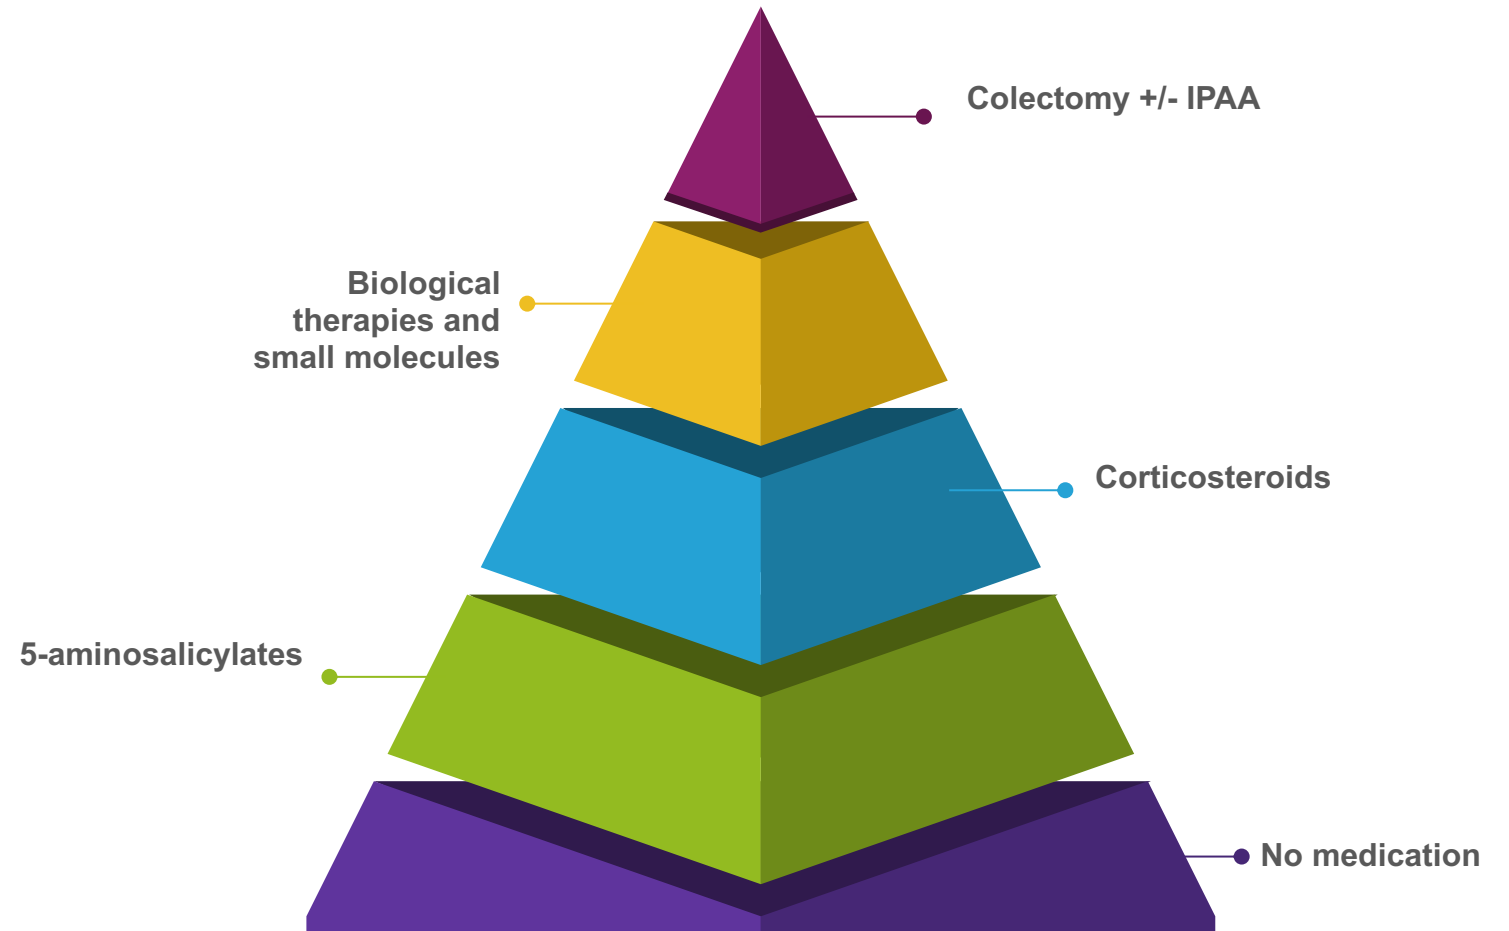

Precision medicine in IBD

Precision medicine in IBD

Diagnosis

Precision medicine in IBD

Diagnosis

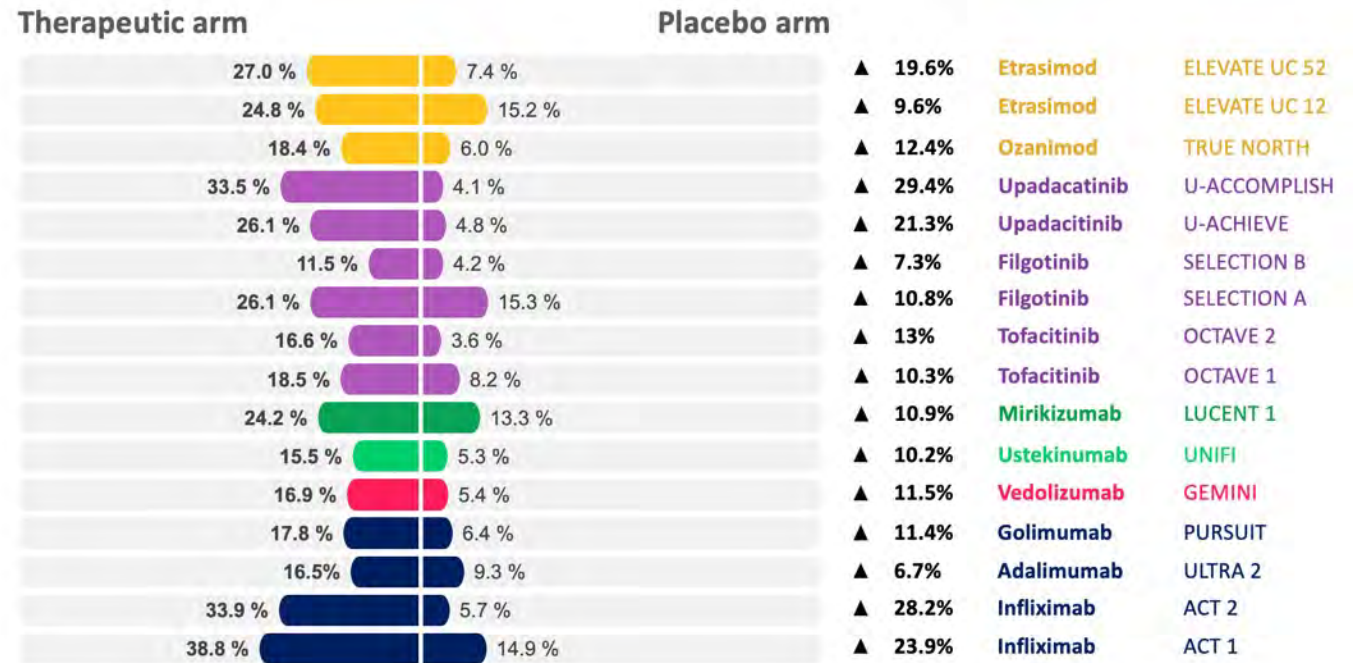

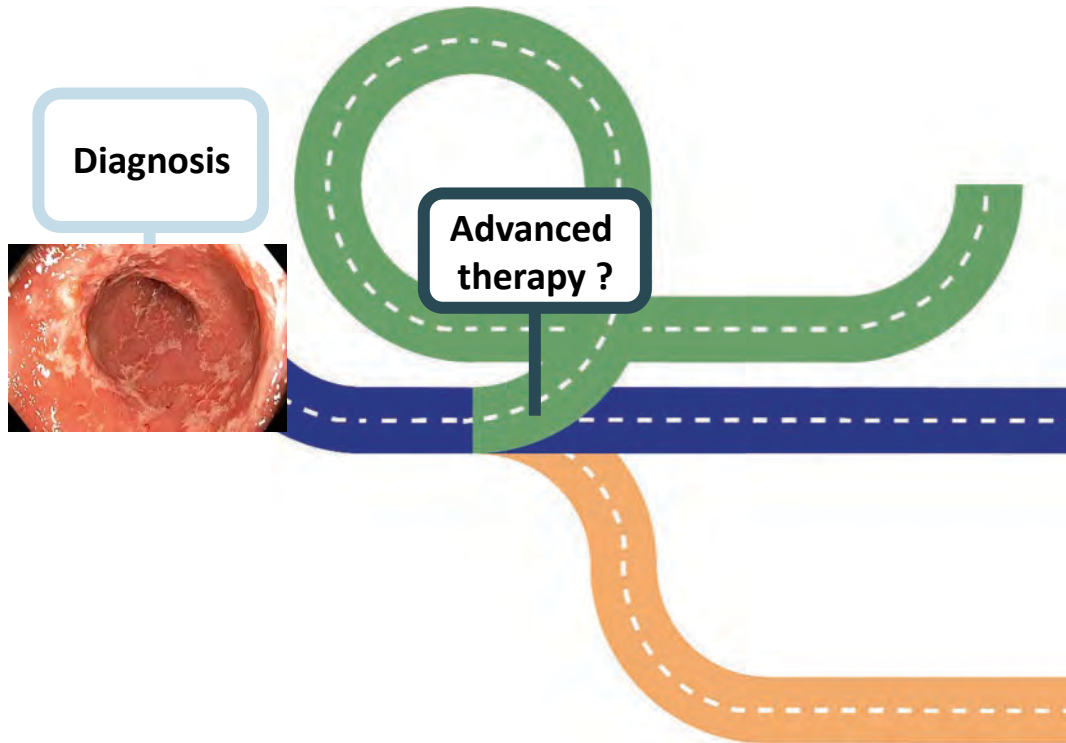

Disease severity variables	CD	UC	Disease activity variables*
Clinical			Clinical
Limited anatomic extent	X	X	Symptoms
Growth impairment (pediatric)	X		Biomarkers
Age at diagnosis <14 years	X	X	C-reactive protein
Age at diagnosis <40 years (adults)	X	X	Fecal calprotectin
Smoking history	X		Albumin
Perianal or severe rectal disease	X		Hemoglobin
Penetrating disease	X		Endoscopic
Strictureing disease	X		Disease activity scores
Multi- or long-segment ileal (>20 cm), disease proximal to TI	X		
Extensive bowel involvement	X	X	
Emergent diagnosis, hospitalization	X	X	
Delay in diagnosis	X	X	
Need for systemic steroids	X	X	
<i>C difficile</i> , cytomegalovirus infection		X	
Serologies			
ASCA (+)	X		
ANCA (+)	X	X	
Anti-Cbir (+) (UC: pediatric)	X	X	
Anti-GMCSF (+)	X		
Genetic			
NOD2 mutation	X		

X Mild
X Severe

* Based on data from Torres et al, Lancet, 2017 (CD) and Rubin et al, AJG, 2019 (UC)

Precision medicine in IBD

Key principles in (IBD) biomarker development

Key principles in (IBD) biomarker development

Define clear, objective and clinically relevant outcomes

- IBD-related surgery
- Stricture development
- Abscess development
- Time to colectomy
- Need for advanced therapy
- Bowel damage

- Clinical remission
- Steroid-free remission
- Endoscopic remission
- Histological remission
- Transmural remission
- Reduced disability

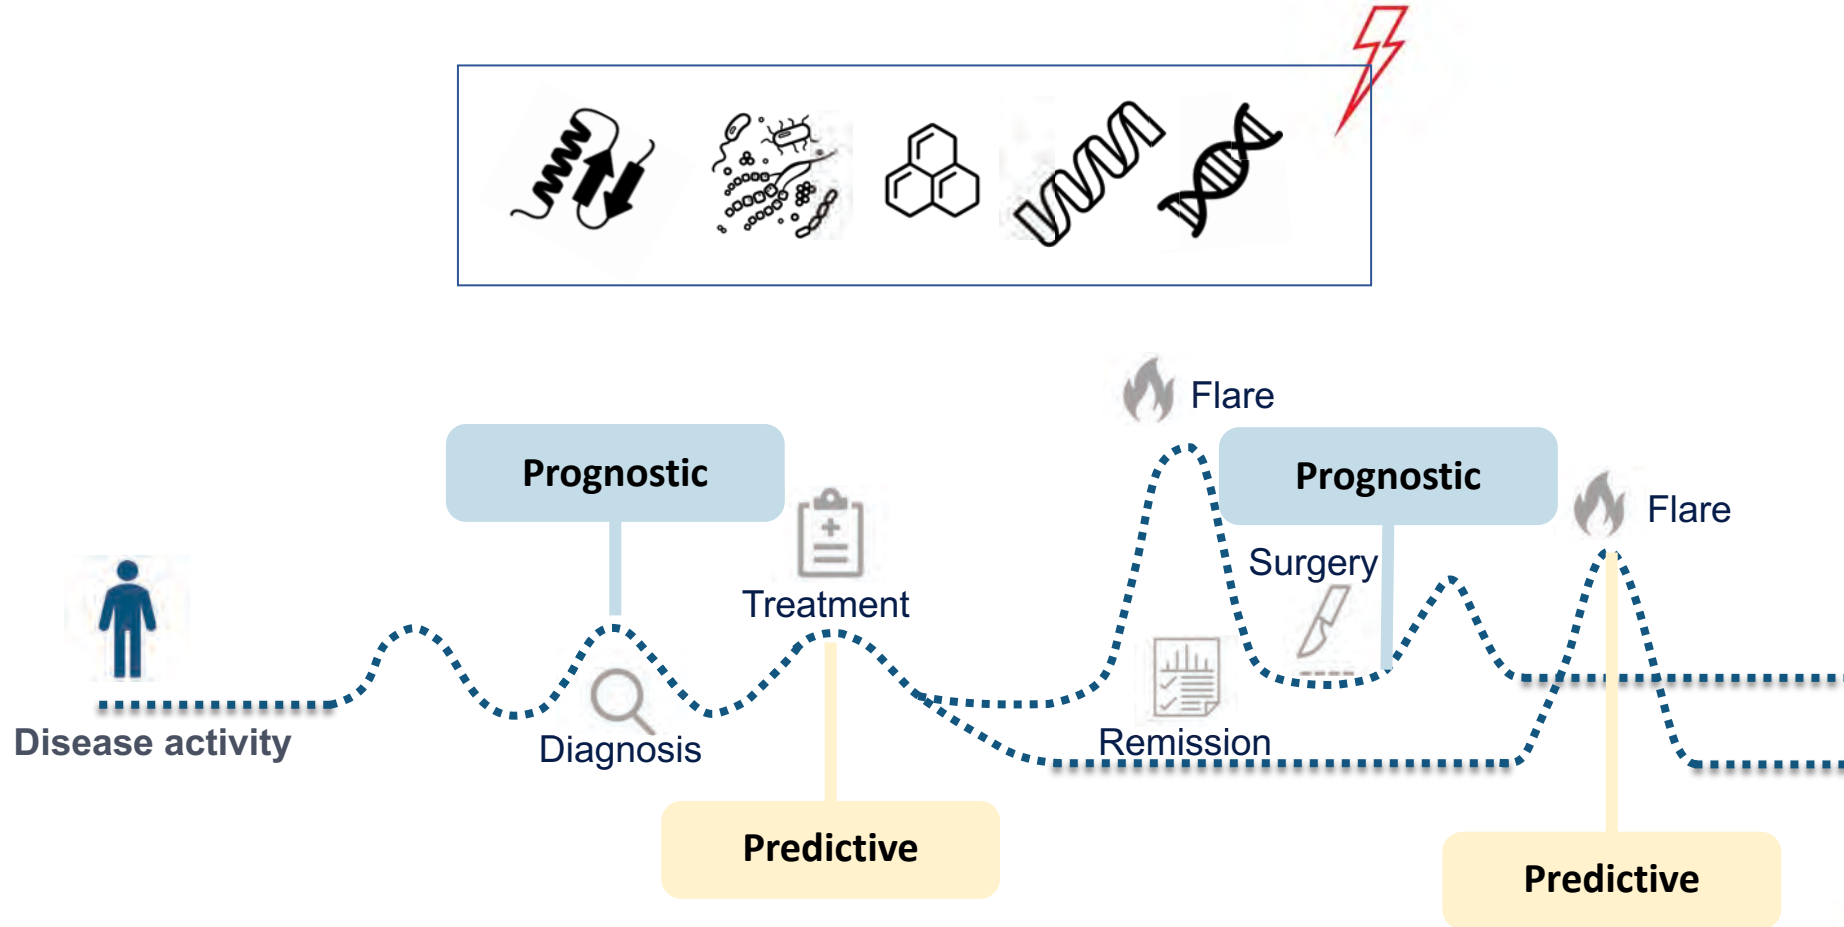

Key principles in (IBD) biomarker development

Standardisation of metadata (definitions) across independent studies

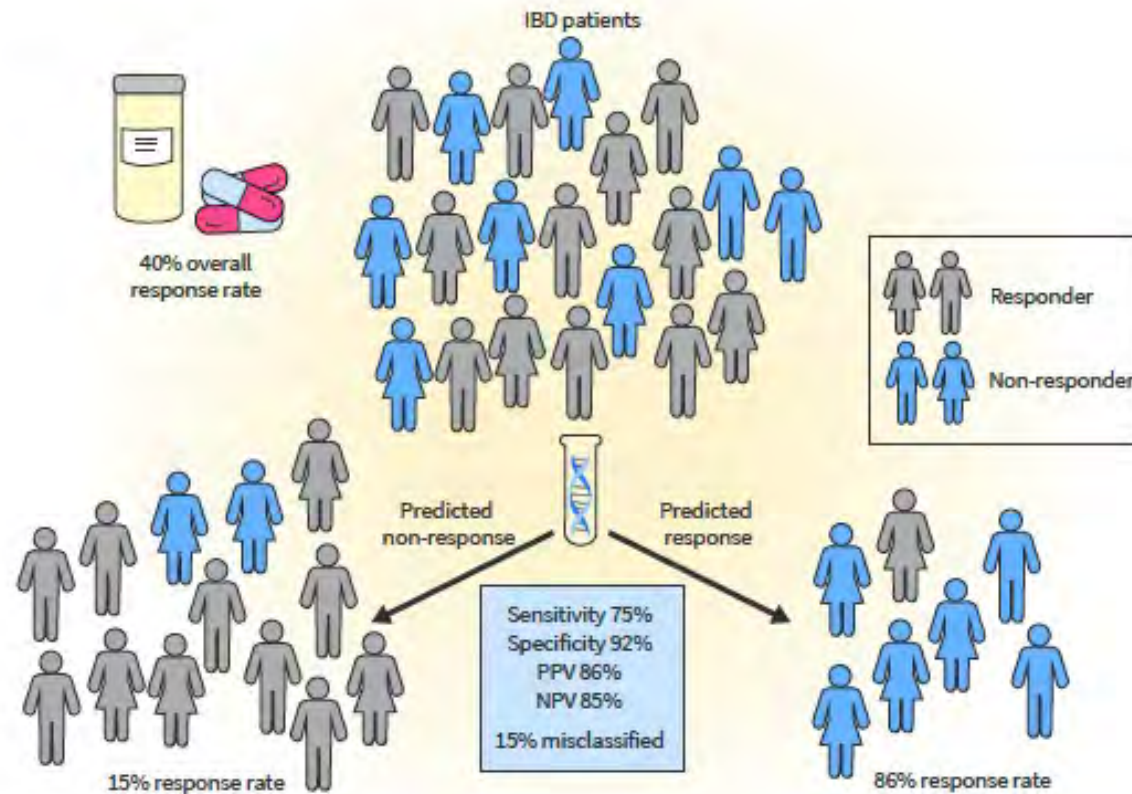

Key principles in (IBD) biomarker development

Assess biomarkers in specific patient populations and/or timepoints

Key principles in (IBD) biomarker development

Define criteria for evaluating performance and impact of new biomarkers
Communicate about uncertainty

 Prins et al. Frontiers in Immunology 2021.

The path forward: embracing disease complexity

Discovery cohort

Validation 1 – Historic microarray cohort

Lee et al. JCI. 2011.

Validation 2 – New RNA seq cohort

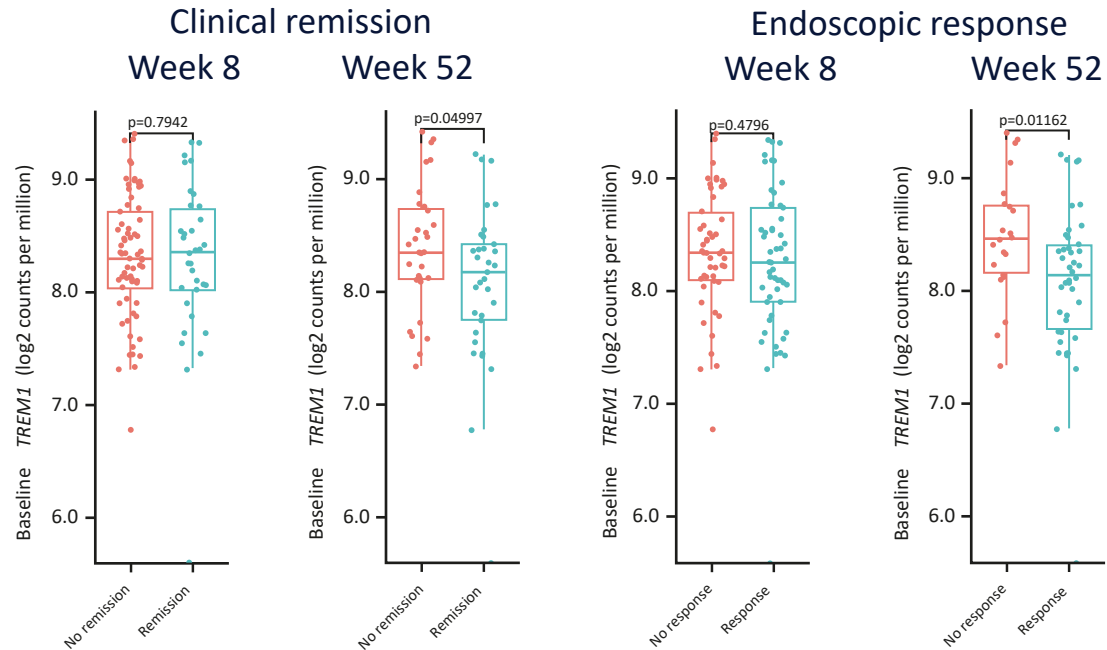

Verstockt B, Lee JCL. Unpublished.

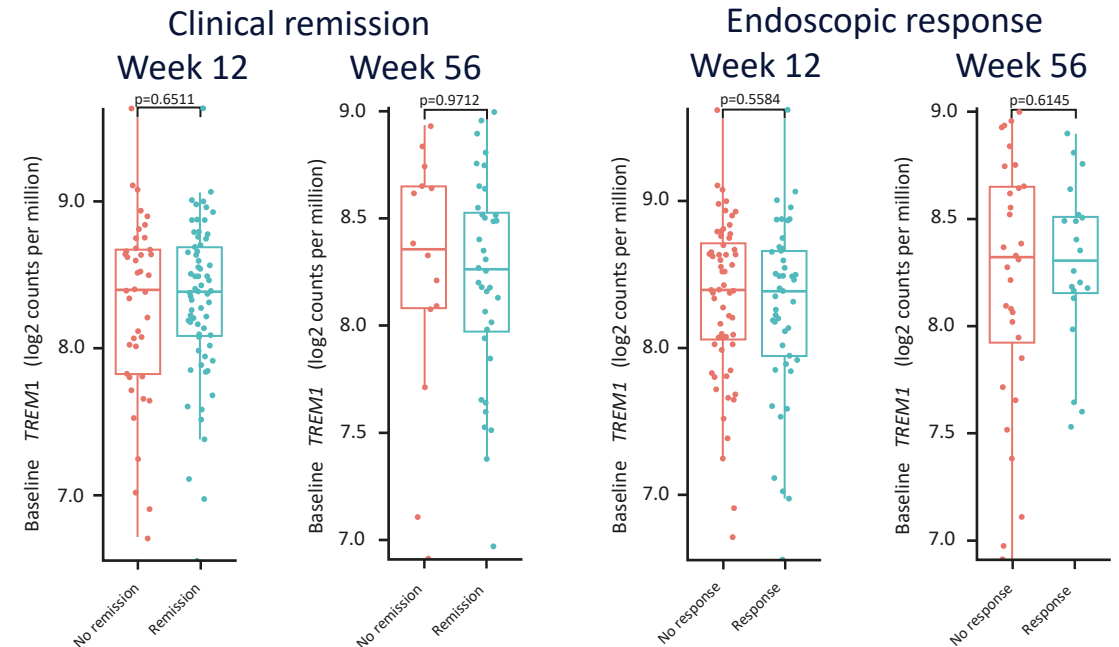

The path forward: embracing disease complexity

A single gene or protein is too simple for a complex disease like IBD

SERENE-UC

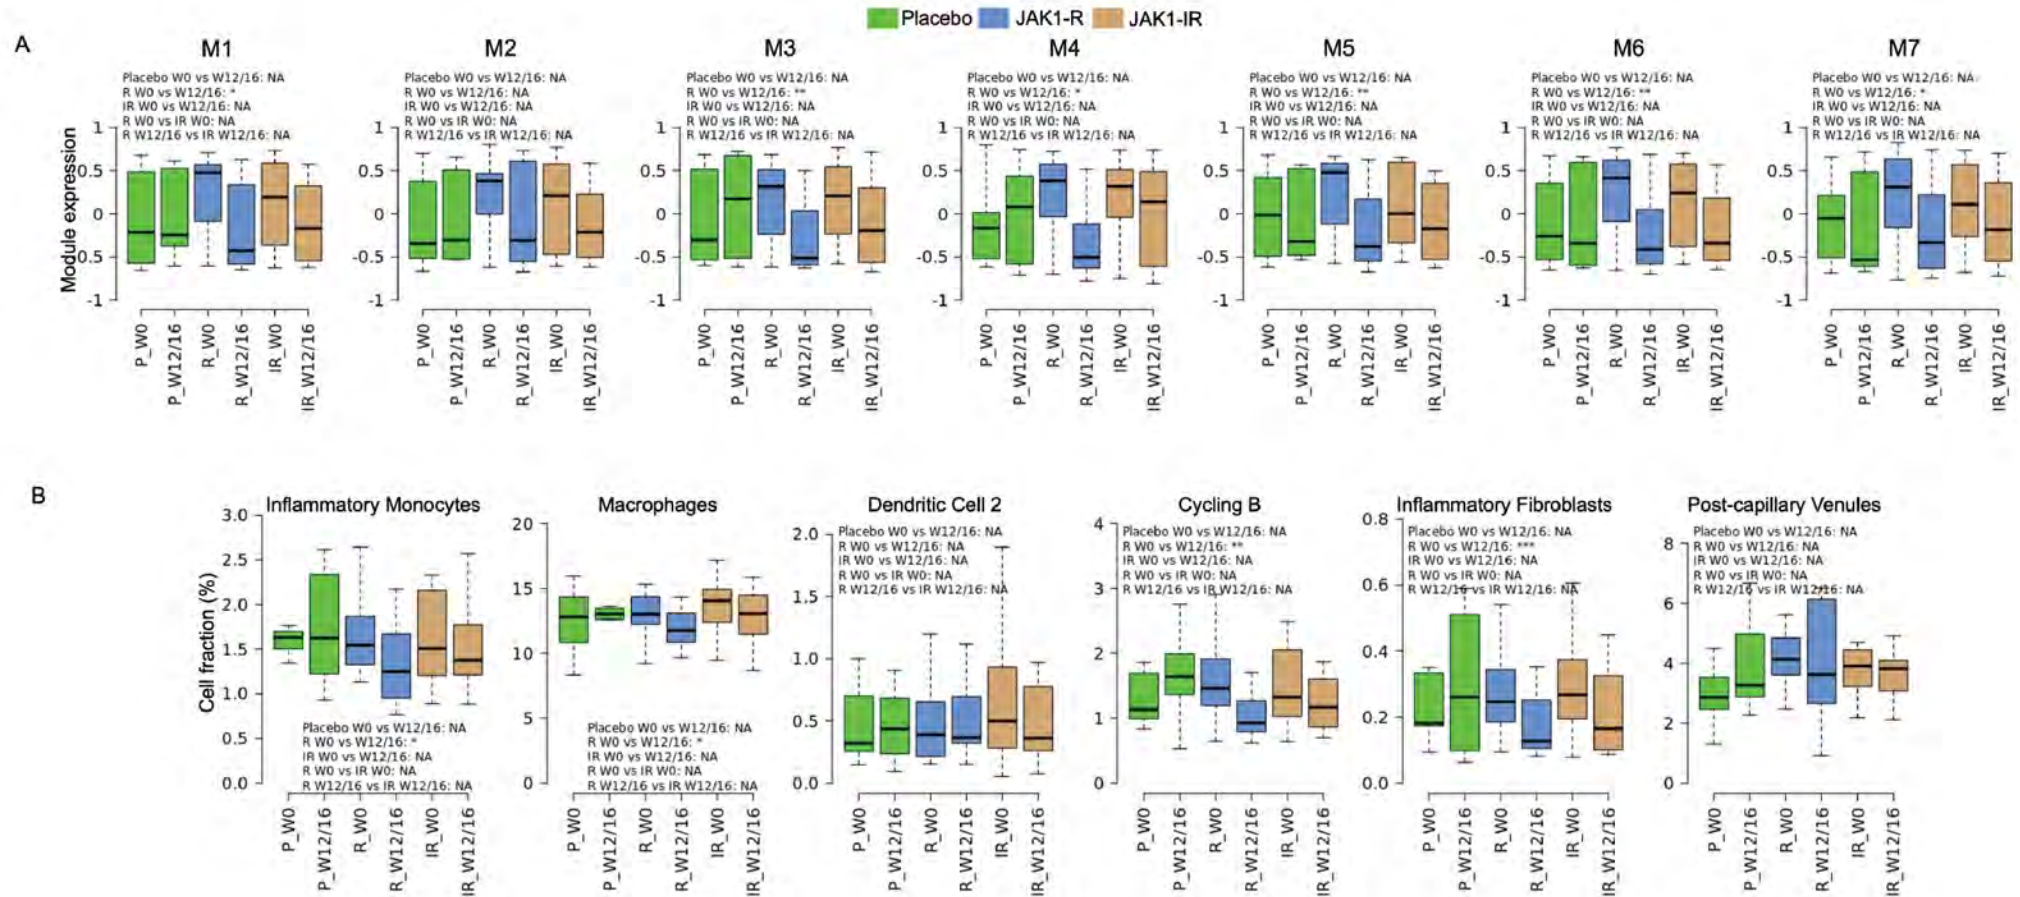

SERENE-CD

- *TREM1* was not linked to clinical response or endoscopic remission in SERENE-UC and SERENE-CD
- *TREM1* was not found to be predictive of clinical outcomes when stratified by drug levels in both studies

The path forward: embracing novel technologies

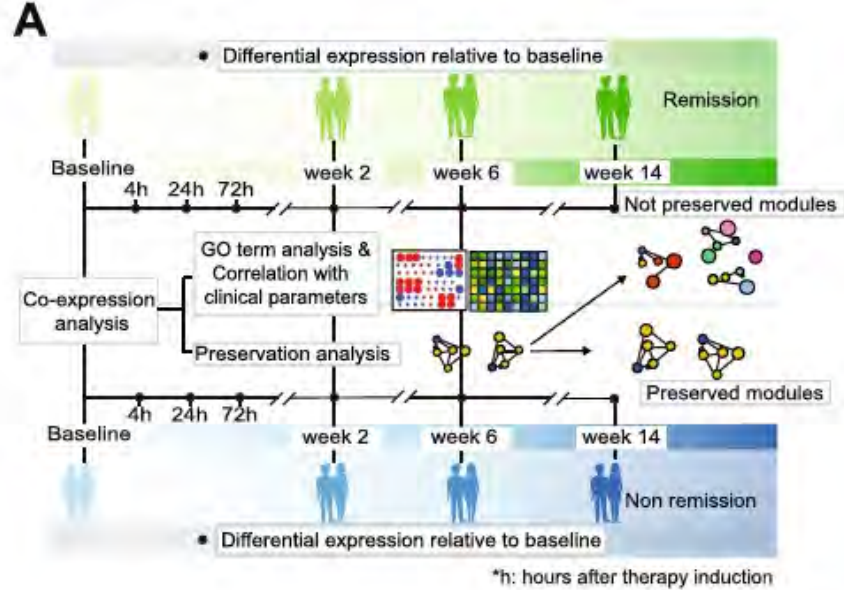

Smillie et al. Cell 2019.

Steele et al. Clinical and Translational Gastroenterology 2023.

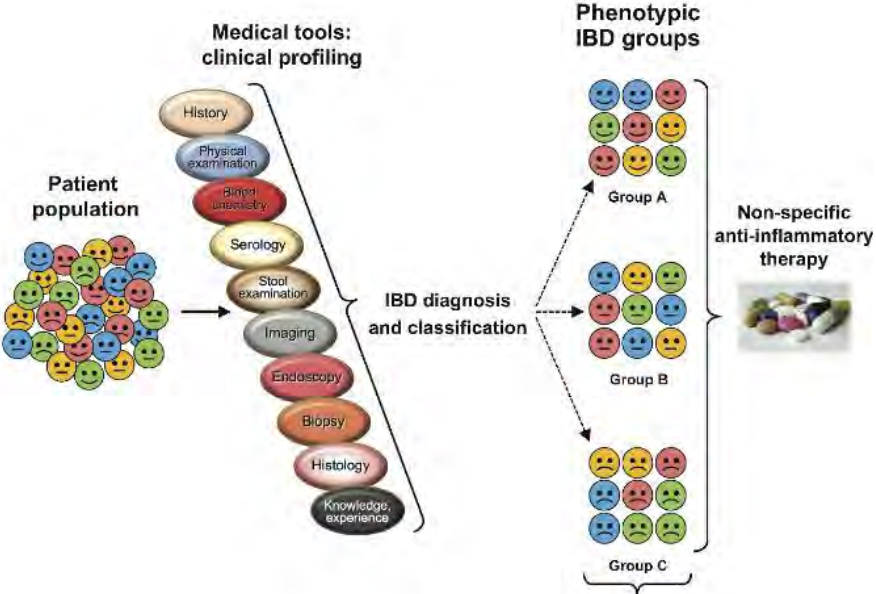

Wang et al. IBD 2023.

The path forward: look into dynamics of response

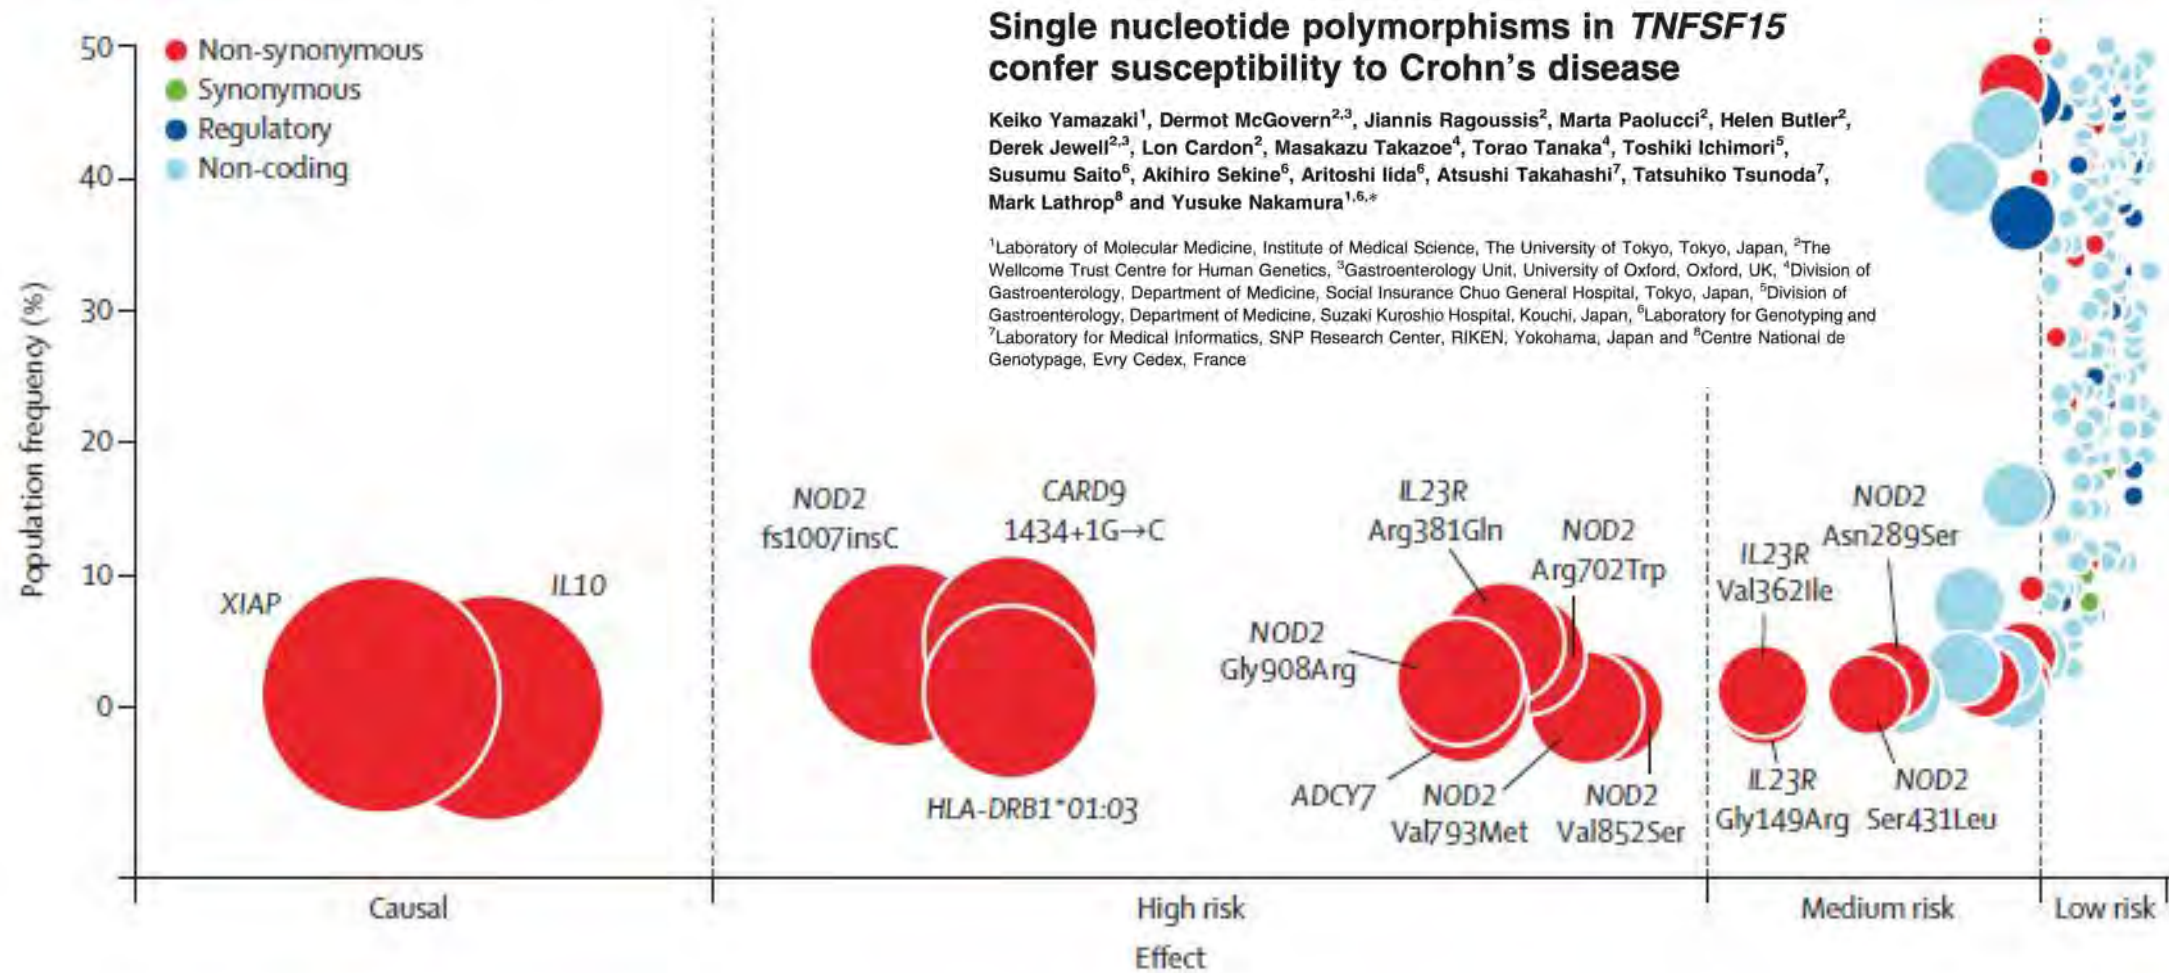

The path forward: reverting the process

Physician-based traditional medicine

From the bed to the bench, the example of anti-TL1A therapy

The example of anti-TL1A therapy

Proinflammatory and profibrotic role

Sands et al. UEGW 2023; Yu et al. J Biol Chem 1999; Jin et al. Mucosal Immunology 2013; Xu et al. Front Immunol 2022; Siakavellas et al. IBD 2015; Barrett et al. Am J Pathol 2012; Takedatsu et al. Gastroenterology 2009; Jostins et al. 2012; Michelsen et al. Plos One 2009.

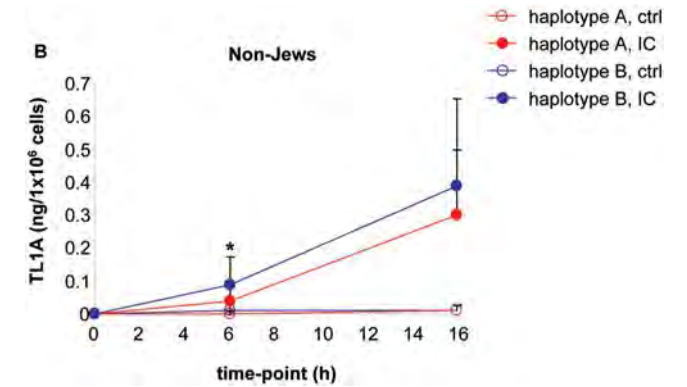

The example of anti-TL1A therapy

Tissue

Circulating monocytes

Allele associated with risk for IBD at *TNFSF15* might increase its expression and thereby promote inflammation

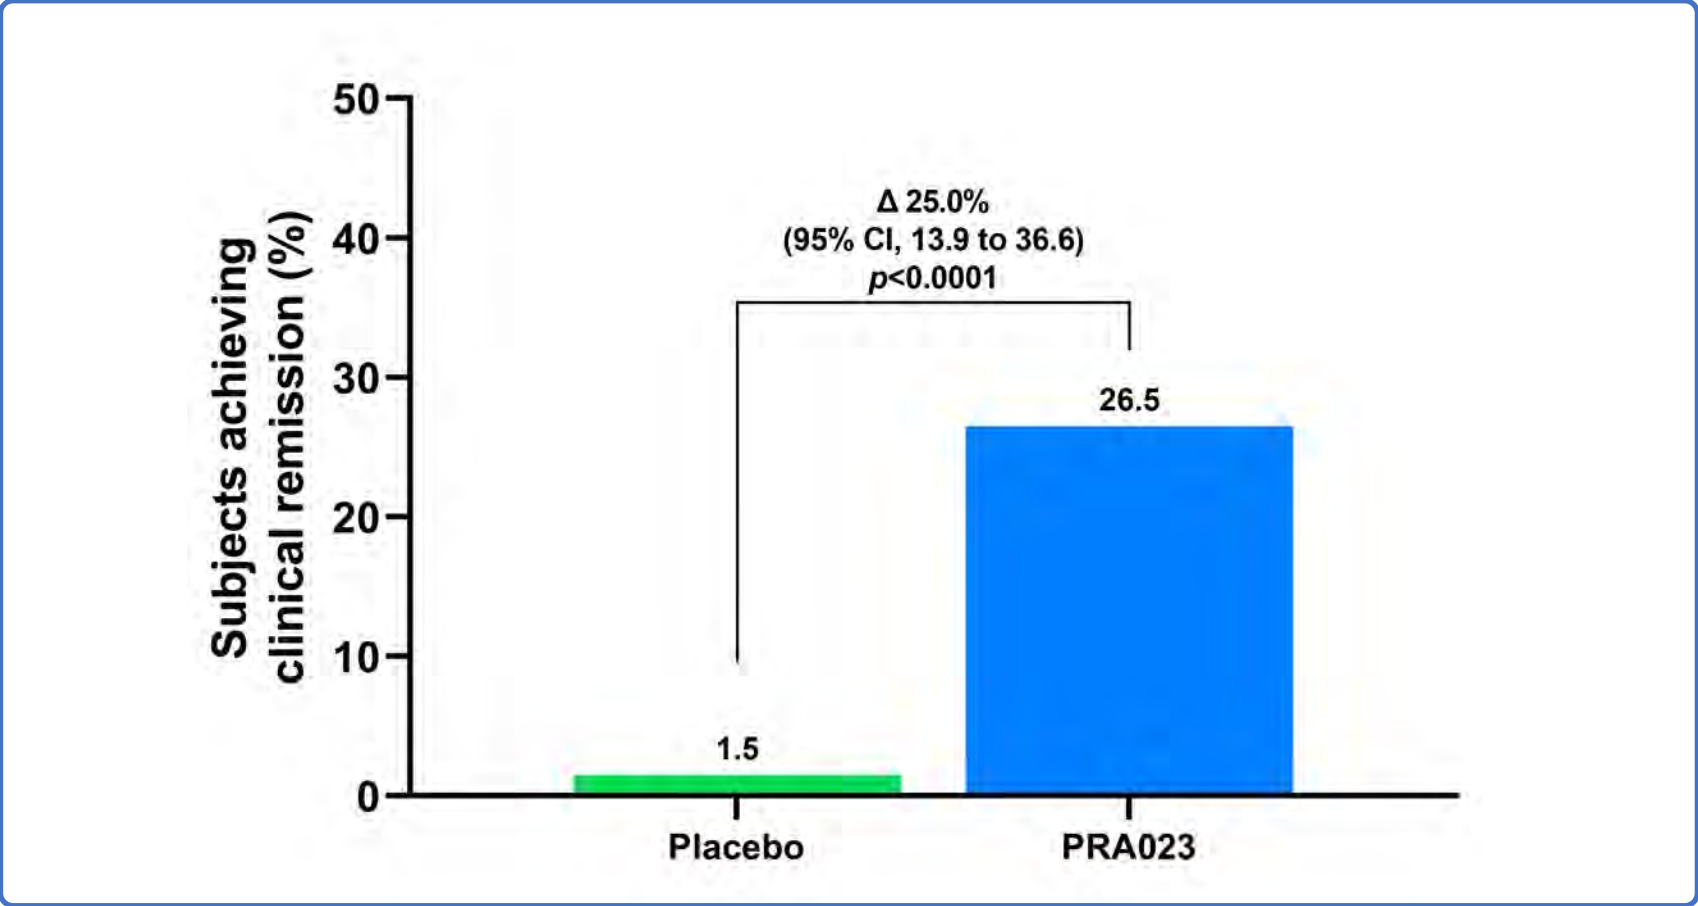

Population studied, the disease status of the subjects, the cell type considered and the observed direction of effect differ between studies, leaving the mechanism by which this genetic locus confers susceptibility to IBD unclear.

The example of anti-TL1A therapy

Sands et al. UEGW 2023; Danese et al. UEGW 2023.

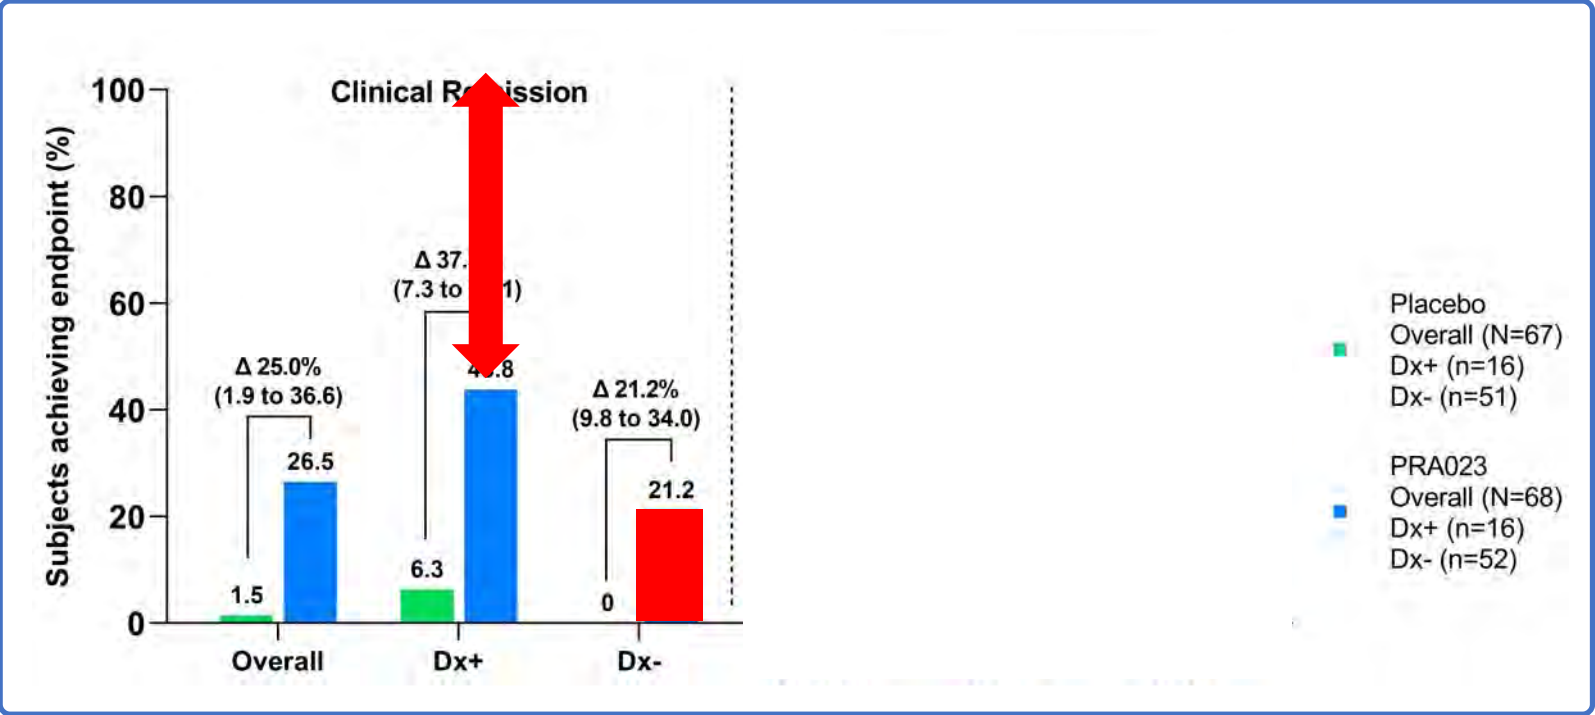

The example of anti-TL1A therapy

Clinical remission per modified Mayo score (mMS) is defined as endoscopic subscore of 0 or 1, rectal bleeding subscore of 0, and stool frequency subscore of 0 or 1 and not greater than Baseline.

Sands et al. UEGW 2023.

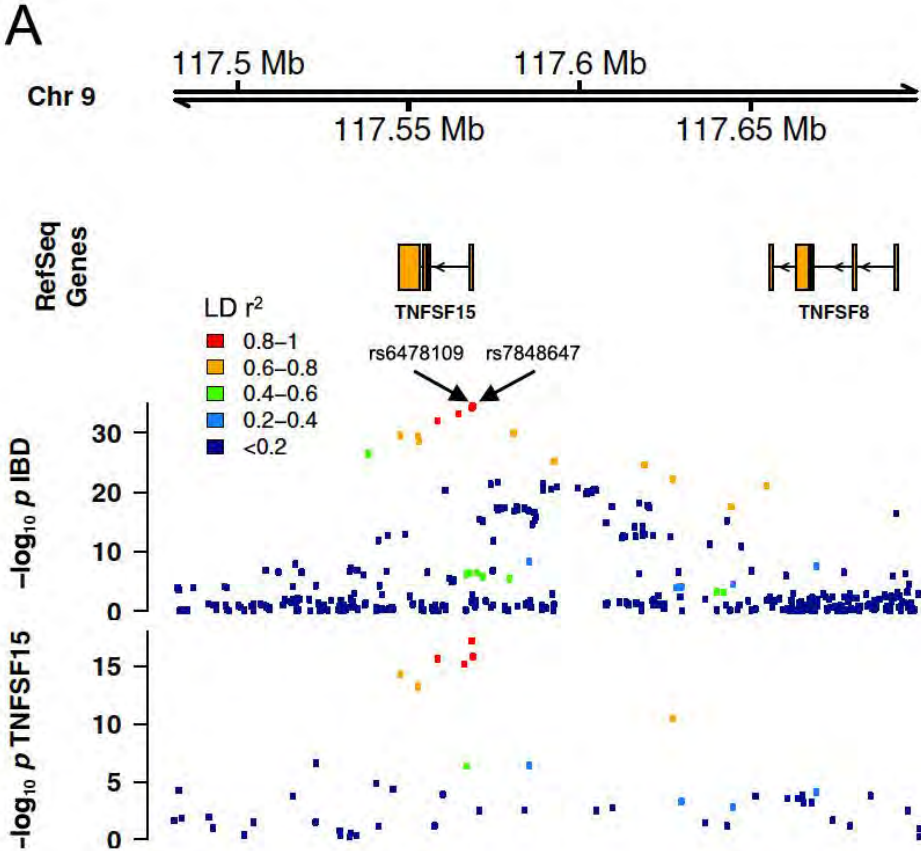

The example of anti-TL1A therapy

Clinical remission per mM is defined as endoscopic subscore of 0 or 1, rectal bleeding subscore of 0, and stool frequency subscore of 0 or 1 and not greater than baseline. Endoscopic improvement is defined as endoscopy subscore ≤ 1 with no friability. Numbers in parentheses are 95% confidence intervals.

Sands et al. UEGW 2023.

The example of anti-TL1A therapy

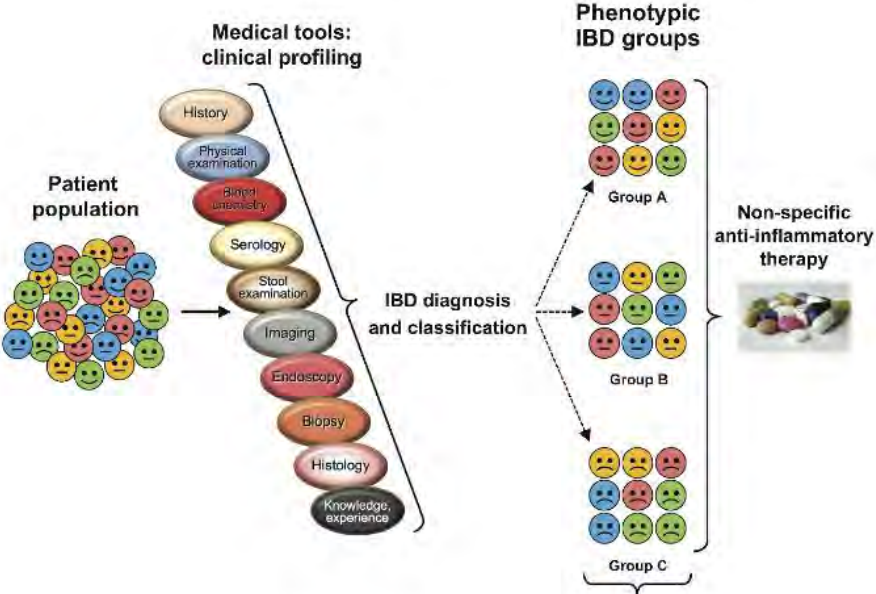

rs6478109
 A (EUR minor allele) = IBD protective
 G (EUR major allele) = IBD risk

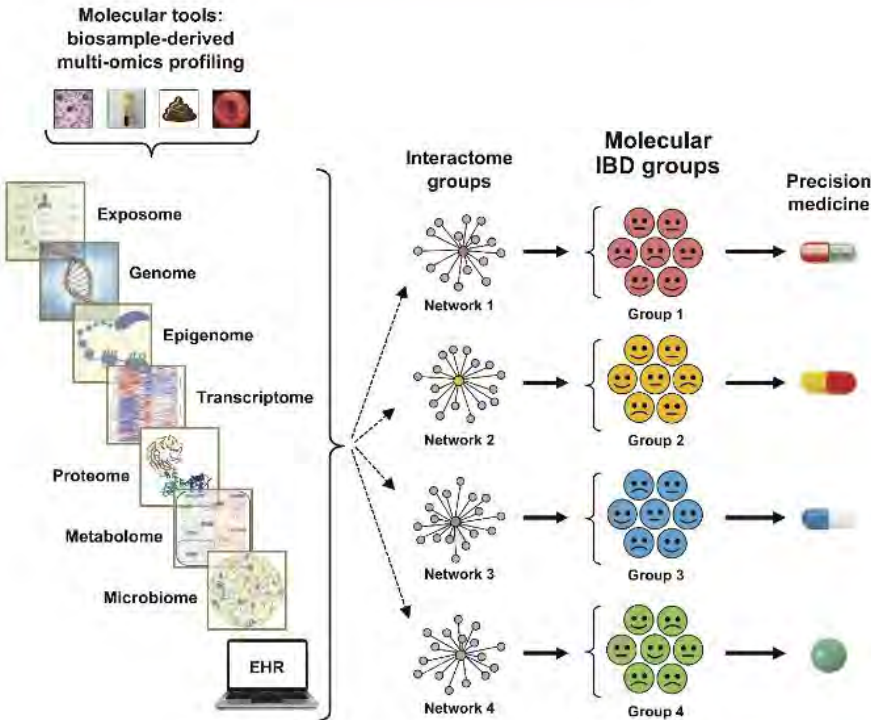

In contrast to previous speculation that *TNFSF15* predisposes to inflammatory disease, this suggests a novel **protective role** for this cytokine in **preventing the development of human IBD**.

The path forward: reverting the process

Physician-based traditional medicine

Omics-based network medicine

Conclusion

- **Precision medicine** is IBD key to **improve outcome** and **reduce disability** in our patients.
- We face **many obstacles** and have to **prioritise** some **key principles** to move the needle, with a focus to **start from the biology** in an **unsupervised** manner.
- We need to **work together**, academia and industry, to raise the bar, **VALIDATE** and make precision medicine a reality.
- **Anti-TL1A therapy** is the first drug development program with a **potential companion diagnostic**, although validation is mandatory in phase III.
